PROFESSIONAL SUMMARY

Second-year Artificial Intelligence student and AI & ML Engineer with hands-on experience building machine learning, deep learning, and computer vision systems for industrial and operational use cases. Experienced in end-to-end ML workflows including problem framing, feature engineering, leakage-safe validation, model evaluation, CNNs, transfer learning, image preprocessing, and human-in-the-loop decision support.

EXPERIENCE

Machine Learning Intern | FlyRank

2026 - Present

- Built an end-to-end content opportunity scoring system on 30,000 anonymized pages from 32 clients, framing the task as a ranked human-review queue rather than an automatic decision.
- Developed a leakage-safe Logistic Regression pipeline with grouped client holdout (24 train / 8 unseen test clients), improving held-out Precision@50 from 0.36 for the baseline to 0.74.
- Designed an operational Hybrid system using 90-day staleness and 100-impression eligibility guardrails plus model ranking; achieved 0.68 Precision@50 while keeping all Top-50 recommendations within review constraints.

AI & ML Engineer | Kapci Coatings

Apr 2026 - Present

- Develop confidential AI/ML solutions for industrial paint analysis, color intelligence, and formulation prediction using Python, TensorFlow/Keras, PyTorch, OpenCV, and scikit-learn.
- Contribute to an ongoing spectral paint formula prediction system using neural-network regression on wavelength and reflectance data.

AI Intern | Kapci Coatings

Sep 2025 - Mar 2026

- Developed an industrial color matching system achieving 97% accuracy across approximately 93 paint color classes using CNNs, transfer learning, image preprocessing, and nearest-color matching.
- Built a Metallic vs. Solid paint classifier achieving 98% accuracy and improved robustness to lighting, angle, blur, and noise through augmentation and a Python/OpenCV best-frame selection workflow.

AI Summer Trainee | Suez Canal Container Terminal (SCCT)

Summer 2025

- Completed one month of training with exposure to port operations, logistics workflows, terminal management systems, and operational processes.

SELECTED PROJECTS

- FlyRank - Refresh / Content Opportunity Scoring: interpretable ML ranking, grouped validation, leakage controls, error analysis, eligibility guardrails, human-review action rules, and reproducible outputs.
- Spectral Paint Formula Prediction - Ongoing: neural-network regression system to predict paint formula components from spectral wavelength and reflectance data.

EDUCATION

Bachelor of Science in Artificial Intelligence | Faculty of Computers and Information, Suez Canal University

Expected 2028

TECHNICAL SKILLS

Programming: Python, SQL

Machine Learning: Regression, Classification, Feature Engineering, Data Preprocessing, Model Evaluation, Ranking, Leakage Prevention

Deep Learning & Computer Vision: CNNs, Transfer Learning, Image Processing, Data Augmentation

Libraries & Frameworks: scikit-learn, TensorFlow, Keras, PyTorch, OpenCV, Pandas, NumPy, Matplotlib

Tools: Jupyter Notebook, Google Colab, VS Code, Git, GitHub

CERTIFICATIONS

- IBM AI Engineering Professional Certificate - Coursera
- IBM Machine Learning Specialization - Coursera
- Machine Learning Specialization - DeepLearning.AI & Stanford University
- Machine Learning Scientist in Python - DataCamp
- AI Engineer for Data Scientists Associate - DataCamp

LANGUAGES

- Arabic - Native
- English - Upper-Intermediate / Professional Working Proficiency
